

INVESTMENT OBJECTIVE

The Quadrant Europe Fund aims to overperform the Stoxx Europe 600 EUR Index NTR (SXXR) (the Benchmark Index). In order to achieve its objective, the Fund gains exposure to the performance of a portfolio composed of 75 companies from the European region selected according to extra-financial (ESG) and financial quality criteria, combined with risk control mechanisms. The Quadrant Europe Fund selects from a universe made up of the 200 largest European capitalizations with sufficient liquidity and exposed to thematic sectors such as demographic trends, ecological transition, digitalization and new society. The latter is done around two axes that are an ESG bias (described in the prospectus available on the website of the Management Company), 25% of the companies with the lowest ESG scores being eliminated, and an important focus on the quality of the selected shares, only the most financially sound companies and with the best fundamentals being retained. At the end of this selection, the weight assigned to each constituent and included in a range of 0.666% to 3.333%, is obtained via a proprietary methodology based on adjusting the weight of each share in the portfolio according to its relative contribution to the risk of the portfolio as a whole (equal risk contribution methodology) in order to obtain an optimal portfolio allocation in profile of risk/return. The fund's exposure to the portfolio of securities can vary from 0 to 150% in order to stabilize the risk profile of the fund. It is reviewed weekly and adjusted for volatility. The Quadrant Europe Fund applies a policy of distributing a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments. If the dividends actually received by the fund are lower (respectively higher) than the fixed dividend distributed, the net asset value of the fund will be reduced (respectively increased) compared to a fund distributing all the dividends actually received. Without taking into account the dividends actually received by the fund, the impact of the policy of distributing a fixed dividend on the net asset value of the fund is greater in the event of a decrease from its initial level (negative effect) than in the event of an increase (positive effect). Thus, in the event of a continued bearish market, the decline in the fund's net asset value will be accelerated.

MONTHLY COMMENT

Eurozone equities outperformed U.S. markets thanks to stable macroeconomic indicators and well received corporate earnings. The Stoxx Europe 600 index rose by 3.22%, while the S&P 500 gained only 0.27% in EUR terms over the month of January. Since the beginning of the year, value stocks have delivered the strongest performances in both Europe and the United States, in contrast with growth stocks, which have lagged behind.

On the global macroeconomic front, growth remains positive, with a slowdown expected in the United States but continued expansion in the eurozone, China, and elsewhere. Inflation has fallen in the eurozone but remains above 2% in the United States. Markets expect further rate cuts from the Fed and only one cut from the ECB in 2026. Major central banks (Fed, ECB, BoE) have kept their rates unchanged. The ECB and the BoE are expected to remain on hold during their first monetary policy decisions of the year, despite eurozone inflation falling to 1.7% in January, which should not alter their stance.

Trade tensions between the United States and China have eased, but U.S. tariffs on the rest of the world continue to weigh on the global economy. Upcoming elections in the United States and Europe could influence fiscal and trade policy, although no major changes are expected before 2027.
