

INVESTMENT OBJECTIVE

The Global Horizon fund aims to overperform the Solactive GBS CW DM Int Large & Mid Cap EUR Index NTR (SCWUEJEN) (the "Benchmark Index"). In order to achieve its objective, the Fund gains exposure to the performance of a portfolio composed of 250 companies from Europe, the US and Japan, selected on the basis of both non-financial (ESG) and financial criteria, coupled with risk management mechanisms. The Global Horizon fund selects investments from a universe of large-cap companies offering sufficient liquidity. There are two guiding principles underpinning the selection process. The first is a strong ESG bias (described in the prospectus available on the website of the Management Company); the third of companies with the lowest ESG scores are excluded. The second, is a major focus on the quality of the assets selected: only the companies with the strongest financials and best fundamentals are retained. Once the selection is made, each holding within each component (Europe, the US and Japan) is given equal weighting. The components themselves, are weighted to achieve an allocation of 50% Europe, 40% US and 10% Japan. The fund's exposure to the basket of stocks is permitted to range from 0% to 150% to maintain a target volatility of approximately 15%. It is reviewed on a daily basis and adjusted for volatility. The Global Horizon fund's distribution policy establishes a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments. If the dividends actually received by the fund are lower (or higher) than the fixed dividend distributed, the fund's actual net asset value will be lower (or higher) than that of a fund that pays out all of the dividends actually received. Regardless of the dividends actually received by the fund, the fixed dividend distribution policy has a greater impact on the fund's actual net asset value if the NAV falls relative to its initial level (negative effect) than if it rises (positive effect). This means that the fund's actual net asset value will fall at a faster rate in the event of a prolonged bear market.

MONTHLY COMMENT

The economic data from the summer confirm resilient growth in the main economies. In the eurozone, Q2 growth reached 0.1% quarter-on-quarter, in line with an annual growth of 1% for 2025. Differences remain marked between the main economies: southern economies still show strong momentum, while growth is more moderate in northern economies, with 0.3% in France and a further contraction of activity in Germany. Inflation in August, at 2.1% for total inflation and 2.3% for core inflation, confirms the continuation of the disinflationary trend. In this context, the ECB maintained its key interest rate at 2% in July and is expected to keep it at this level at the September meeting.

In the United States, although economic data remain disrupted by the trade war, underlying data show an economy gradually slowing to a pace of 1.5%-2%, with a less dynamic labor market but a resurgence of inflation. Indeed, after the contraction in the first quarter, GDP recorded an expansion of 3.3% quarter-on-quarter annualized and domestic demand expanded by 1.5%. Labor market data show a clear slowdown in job creation but an unemployment rate still low at 4.2% in July. Tariffs are beginning to have an effect on inflation, with July's PCE inflation at 2.6% year-on-year. The slowdown in the labor market has led the Fed to announce a gradual easing of its monetary policy, with a rate cut very likely at the September meeting.

In this context, equity markets showed an upward trend in August. On the US markets, the S&P 500 increased by 1.9% in August while the Nasdaq rose 0.8% over the same period, supported by strong profit growth, notably in the AI sector (profits of the Magnificent 7 were up 27% year-on-year in Q2-25). On the European side, the increase was somewhat more modest, with the Euro Stoxx 50 up 0.6% in August, notably with a 1% decline in the CAC 40 following new political tensions.
