EQUINOX TRANSATLANTIC

INVESTMENT OBJECTIVE

The investment objective of SOLYS - Equinox Transatlantic (the "Sub-Fund") is to generate performance over a long-term horizon by exploiting investment opportunities on the international equity markets with a major component on European equity markets, while providing a fixed stream of distributions. There is no pertinent or relevant benchmark index for the Sub-Fund, due to its actively managed investment strategy. Investors may however choose to use the Solactive GBS CW DM US & Eurozone EUR Index NTR (SCWUEZEN) (the "Index" and the "Investment Universe") for indicative ex-post performance comparison purposes. The 'Portfolio' consists primarily of financial futures positions rolled on financial equity indices. Exposure to the various equity indices will be weighted in accordance with a proprietary methodology developed by the Management Company (the "Methodology"). The exposure to US equities (S&P 500 Index (SPX Index)) is expected to represent around 50% of Sub-Fund's net assets and the portfolio exposure to European equities (Euro Stoxx 50 Price EUR Index (SX5E)) is expected to represent around 100% of Sub-Fund's net assets, with a permanent aggregate global exposure at 150%. In addition to such financial futures, the Portfolio may comprise equities on an exceptional basis. The rolled futures and/or equities comprised within the Portfolio will be rebalanced in compliance with the Methodology on a monthly basis. However, the Management Company may decide to rebalance the rolled futures and/or equities comprised within the Portfolio at any time at its discretion (the "Rebalancing Date").

The Sub-Fund activated share class distributes a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments.

MONTHLY COMMENT

September was marked by renewed inflationary pressures, rising energy prices and a new phase of monetary tightening by major central banks. The conflict between the United States and Iran kept oil prices close to $100 per barrel, fueling inflation expectations and increasing investor caution.
The Federal Reserve and the European Central Bank both raised their policy rates by 25 basis points, reaffirming their commitment to bringing inflation back toward target levels.
US equity markets displayed significant divergence. Driven by enthusiasm surrounding artificial intelligence and semiconductor companies, the Nasdaq 100 gained +3.30%, while the S&P 500 remained broadly flat at -0.35%. Market performance continued to be increasingly concentrated in a limited number of large-cap technology stocks.

European markets experienced a more challenging month. The CAC 40 declined by -4.16% and the Euro Stoxx 50 by -2.25%. Investor sentiment was negatively impacted by rising energy costs, weaker growth prospects and the ECB's increasingly hawkish stance. Defensive, energy and defense-related sectors proved more resilient than industrial and consumer-oriented sectors.

Fixed income markets were one of the main sources of pressure during the month. In the United States, the 10-year Treasury yield rose above 5.2%, a level not seen for several decades, while the 30-year yield reached 5.6%. This sharp increase in yields contributed to one of the worst quarters for global bond markets since 2024.
In Europe, sovereign bond yields also moved significantly higher as investors priced in further ECB tightening and the inflationary impact of rising energy prices. Government bonds recorded meaningful losses, while spreads widened in several countries, particularly in France where the OAT-Bund spread increased.
