

INVESTMENT OBJECTIVE

The Euro Evolution Fund aims to overperform the Euro Stoxx EUR Index NTR (SXXT) (the "Benchmark Index"). In order to achieve its objective, the Fund gains exposure to the performance of a portfolio composed of 50 from the European region selected according to extra-financial (ESG) and financial quality criteria, combined with risk control mechanisms. The Euro Evolution Fund selects from a universe made up of the largest European capitalizations with sufficient liquidity. The latter is done around two axes that are an ESG bias (described in the prospectus available on the website of the Management Company), 25% of the companies with the lowest ESG scores are being eliminated, and an important focus on the quality of the selected shares, only the most financially sound companies and with the best fundamentals being retained. At the end of this selection, the weight assigned to each constituent and within a range of 1 to 5%, is obtained via a proprietary methodology based on adjusting the weight of each share in the portfolio according to its relative contribution to the risk of the portfolio as a whole (methodology of equal contribution in risk) in order to obtain an optimal allocation of the portfolio in risk/return profile. The fund's exposure to the portfolio of securities can vary from 0 to 150% in order to stabilize the risk profile of the fund. It is reviewed weekly and adjusted for volatility. The Euro Evolution Fund applies a policy of distributing a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical and monthly payments. If the dividends actually received by the fund are lower (respectively higher) than the fixed dividend distributed, the net asset value of the fund will be reduced (respectively increased) compared to a fund distributing all the dividends actually received. Without taking into account the dividends actually received by the fund, the impact of the policy of distributing a fixed dividend on the net asset value of the fund is greater in the event of a decrease from its initial level (negative effect) than in the event of an increase (positive effect). Thus, in the event of a continued bearish market, the decline in the fund's net asset value will be accelerated.

MONTHLY COMMENT

The economic data from the summer confirm resilient growth in the main economies. In the eurozone, Q2 growth reached 0.1% quarter-on-quarter, in line with an annual growth of 1% for 2025. Differences remain marked between the main economies: southern economies still show strong momentum, while growth is more moderate in northern economies, with 0.3% in France and a further contraction of activity in Germany. Inflation in August, at 2.1% for total inflation and 2.3% for core inflation, confirms the continuation of the disinflationary trend. In this context, the ECB maintained its key interest rate at 2% in July and is expected to keep it at this level at the September meeting.

In the United States, although economic data remain disrupted by the trade war, underlying data show an economy gradually slowing to a pace of 1.5%-2%, with a less dynamic labor market but a resurgence of inflation. Indeed, after the contraction in the first quarter, GDP recorded an expansion of 3.3% quarter-on-quarter annualized and domestic demand expanded by 1.5%. Labor market data show a clear slowdown in job creation but an unemployment rate still low at 4.2% in July. Tariffs are beginning to have an effect on inflation, with July's PCE inflation at 2.6% year-on-year. The slowdown in the labor market has led the Fed to announce a gradual easing of its monetary policy, with a rate cut very likely at the September meeting.

In this context, equity markets showed an upward trend in August. On the US markets, the S&P 500 increased by 1.9% in August while the Nasdaq rose 0.8% over the same period, supported by strong profit growth, notably in the AI sector (profits of the Magnificent 7 were up 27% year-on-year in Q2-25). On the European side, the increase was somewhat more modest, with the Euro Stoxx 50 up 0.6% in August, notably with a 1% decline in the CAC 40 following new political tensions.
