QUADRANT EUROPE

INVESTMENT OBJECTIVE

The Quadrant Europe Fund aims to overperform the Stoxx Europe 600 EUR Index NTR (SXXR) (the Benchmark Index). In order to achieve its objective, the Fund gains exposure to the performance of a portfolio composed of 75 companies from the European region selected according to extra-financial (ESG) and financial quality criteria, combined with risk control mechanisms. The Quadrant Europe Fund selects from a universe made up of the 200 largest European capitalizations with sufficient liquidity and exposed to thematic sectors such as demographic trends, ecological transition, digitalization and new society. The latter is done around two axes that are an ESG bias (described in the prospectus available on the website of the Management Company), 25% of the companies with the lowest ESG scores being eliminated, and an important focus on the quality of the selected shares, only the most financially sound companies and with the best fundamentals being retained. At the end of this selection, the weight assigned to each constituent and included in a range of 0.666% to 3.333%, is obtained via a proprietary methodology based on adjusting the weight of each share in the portfolio according to its relative contribution to the risk of the portfolio as a whole (equal risk contribution methodology) in order to obtain an optimal portfolio allocation in profile of risk/return. The fund's exposure to the portfolio of securities can vary from 0 to 150% in order to stabilize the risk profile of the fund. It is reviewed weekly and adjusted for volatility. The Quadrant Europe Fund applies a policy of distributing a fixed dividend of EUR 5 per fund unit per year, divided into 12 identical monthly payments. If the dividends actually received by the fund are lower (respectively higher) than the fixed dividend distributed, the net asset value of the fund will be reduced (respectively increased) compared to a fund distributing all the dividends actually received. Without taking into account the dividends actually received by the fund, the impact of the policy of distributing a fixed dividend on the net asset value of the fund is greater in the event of a decrease from its initial level (negative effect) than in the event of an increase (positive effect). Thus, in the event of a continued bearish market, the decline in the fund's net asset value will be accelerated.

MONTHLY COMMENT

October 2026 highlighted a clear transatlantic divergence. US markets were weighed down by a historic selloff in AI and semiconductor stocks, higher-than-expected inflation, surging oil prices, and extremely bearish investor positioning, with the Nasdaq-100 bearing the brunt of the decline.
In contrast, Europe benefited from its structural underexposure to the AI theme and a rotation toward defensive and industrial sectors. The Stoxx 600 delivered its best monthly performance since June, while France suffered from waning investor interest due to political and fiscal uncertainties, and the Euro Stoxx 50 ended the month lower as a result of its heavier exposure to financials and technology-related stocks.
Central banks maintained a broadly hawkish stance. Both the Federal Reserve (Fed) and the European Central Bank (ECB) had raised rates in September and signaled that further tightening remained possible. Meanwhile, the Bank of England (BoE), although keeping rates unchanged, moved closer to its first rate hike in more than three years.
Strong US third-quarter GDP growth (+3.4%) provided some support to the macroeconomic outlook. However, persistent inflationary pressures and elevated energy costs continued to cloud the interest rate outlook heading into November.
